

C++ - Loops & Conditions (Short Explanation)

For Loop

Used when number of iterations is known.

```
for(int i=0;i<5;i++){  
    cout<<i;  
}
```

Similar to C; used commonly for array operations.

Practice: Print table of 5.

While Loop

Executes repeatedly while condition is true.

```
int i=1;  
while(i<=3){  
    cout<<i;  
    i++;  
}
```

Ensure variable changes in loop to avoid infinite loops.

Practice: Print numbers 1–10.

If-Else Ladder

Selects one block among multiple conditions.

```
if(x>0) cout<<"Positive";  
else if(x==0) cout<<"Zero";  
else cout<<"Negative";
```

Only the first true condition's block executes.

Practice: Check grade category using if-else ladder.
